

Server API

Address Space

The Server is the provider of the address space. Through the address space a Client interacts with the services implemented by the Server application. Use the following linked components to construct the address space according to your needs. Consider to start with your own custom node manager.

- [OpcAddressSpace](#)
- [OpcNodeManager](#)
- [OpcNodeManagerCollection](#)
- [OpcNodeSetManager](#)
- [OpcLocalReference](#)
- [OpcLocalReferenceCollection](#)
- [OpcNodeAccessToken](#)
- [OpcNodeAccessTokenCollection](#)
- [OpcNamespaceIndexCollection](#)
- [OpcReadOnlyNamespaceIndexCollection](#)
- [OpcNamespaceUriCollection](#)
- [OpcReadOnlyNamespaceUriCollection](#)
