

# OpcArgumentGlobalization Members

**Namespace:** Opc.UaFx

**Assemblies:** Opc.UaFx.Advanced.dll, Opc.UaFx.Advanced.dll

The [OpcArgumentGlobalization](#) type exposes the following members.

## Properties

### Cultures

Gets a sequence of [CultureInfo](#) objects associated with the resources maintained by the current [OpcArgumentGlobalization](#).

**C#**

```
public IEnumerable<CultureInfo> Cultures { get; }
```

#### Property Value

[IEnumerable<CultureInfo>](#)

An [IEnumerable`1](#) of unique [CultureInfo](#) objects.

### Locales

Gets a sequence of [String](#) objects representing the [CultureInfo.Name](#) of the [Cultures](#) associated with the resources maintained by the current [OpcArgumentGlobalization](#).

**C#**

```
public IEnumerable<string> Locales { get; }
```

#### Property Value

[IEnumerable<String>](#)

An [IEnumerable`1](#) of unique [String](#) objects.

### Values

Gets a sequence of [String](#) objects representing the resources associated with the [Cultures](#) maintained by the current [OpcArgumentGlobalization](#).

**C#**

```
public IEnumerable<string> Values { get; }
```

#### Property Value

## IEnumerable<String>

An `IEnumerable`1` of `String` objects.

# Methods

## Add(CultureInfo, String)

Adds or overrides the specified resource `value` associated with the `culture` specified.

### C#

```
public void Add(CultureInfo culture, string value)
```

### Parameters

`culture CultureInfo`

The non-neutral `CultureInfo`.

`value String`

The `String` value of the resource.

### Exceptions

`ArgumentException`

The `culture` is a neutral culture.

`ArgumentNullException`

The `culture` is a null reference (Nothing in Visual Basic).

## Add(String, String)

Adds or overrides the specified resource `value` associated with the culture identified by `cultureName`.

### C#

```
public void Add(string cultureName, string value)
```

### Parameters

`cultureName String`

The `CultureInfo.Name` of a well known non-neutral `CultureInfo`.

`value String`

The `String` value of the resource.

## Exceptions

### ArgumentException

The `cultureName` is an empty string or the `CultureInfo` referred to by `cultureName` is a neutral culture.

### ArgumentNullException

The `cultureName` is a null reference (Nothing in Visual Basic).

### CultureNotFoundException

The culture specified by `cultureName` does not refer to a well known culture.

## Clear()

Removes all resources associated with the `Cultures`.

### C#

```
public void Clear()
```

## Remove(CultureInfo)

Removes the resource associated with the `culture` specified.

### C#

```
public void Remove(CultureInfo culture)
```

## Parameters

### culture CultureInfo

The non-neutral `CultureInfo`.

## Exceptions

### ArgumentException

The `culture` is a neutral culture.

### ArgumentNullException

The `culture` is a null reference (Nothing in Visual Basic).

## Remove(String)

Removes the resource associated with the culture identified by `cultureName`.

### C#

```
public void Remove(string cultureName)
```

## Parameters

cultureName String

The [CultureInfo.Name](#) of a well known non-neutral [CultureInfo](#).

## Exceptions

[ArgumentException](#)

The `cultureName` is an empty string or the [CultureInfo](#) referred to by `cultureName` is a neutral culture.

[ArgumentNullException](#)

The `cultureName` is a null reference (Nothing in Visual Basic).

[CultureNotFoundException](#)

The culture specified by `cultureName` does not refer to a well known culture.

## Translate(OpcContext, OpcText)

### C#

```
public OpcText Translate(OpcContext context, OpcText text)
```

## Parameters

context [OpcContext](#)

text [OpcText](#)

## Returns

[OpcText](#)

## Exceptions

[ArgumentNullException](#)

The `context` or `text` is a null reference (Nothing in Visual Basic).
