

OpcDeleteReference Members

Namespace: Opc.UaFx

Assemblies: Opc.UaFx.Advanced.dll, Opc.UaFx.Advanced.dll

The [OpcDeleteReference](#) type exposes the following members.

Constructors

OpcDeleteReference(OpcNodeId, OpcNodeId)

Initializes a new instance of the [OpcDeleteReference](#) class using the identifiers of the nodes which shall not longer reference each other. The relation is deleted in bidirectional direction using [Organizes](#) as the type of reference.

C#

```
public OpcDeleteReference(OpcNodeId nodeId, OpcNodeId targetNodeId)
```

Parameters

nodeId [OpcNodeId](#)

The [OpcNodeId](#) through that the source node can be identified and accessed.

targetNodeId [OpcNodeId](#)

The [OpcNodeId](#) through that the target node can be identified and accessed.

Exceptions

[ArgumentException](#)

The **nodeId** or **targetNodeId** is equals [Null](#).

[ArgumentNullException](#)

The **nodeId** or **targetNodeId** is a null reference (Nothing in Visual Basic).

OpcDeleteReference(OpcNodeId, OpcNodeId, Nullable<OpcReferenceDirection>)

Initializes a new instance of the [OpcDeleteReference](#) class using the identifiers of the nodes which shall not longer reference each other using the **direction** specified. The reference to delete have to be of the relation defined by **direction** using the [Organizes](#) as the type of reference.

C#

```
public OpcDeleteReference(OpcNodeId nodeId, OpcNodeId targetNodeId, OpcReferenceDirection? direction)
```

Parameters

`nodeId` `OpcNodeId`

The `OpcNodeId` through that the source node can be identified and accessed.

`targetNodeId` `OpcNodeId`

The `OpcNodeId` through that the target node can be identified and accessed.

`direction` `Nullable<OpcReferenceDirection>`

One of the members defined by the `OpcReferenceDirection` enumeration which defines the kind of relation of reference to delete or a null reference (Nothing in Visual Basic) in case there the relation is to be deleted in bidirectional direction.

Exceptions

`ArgumentException`

The `nodeId` or `targetNodeId` is equals `Null`.

`ArgumentNullException`

The `nodeId` or `targetNodeId` is a null reference (Nothing in Visual Basic).

OpcDeleteReference(`OpcNodeId`, `OpcNodeId`, `Nullable<OpcReferenceDirection>`, `OpcNodeId`)

Initializes a new instance of the `OpcDeleteReference` class using the identifiers of the nodes which shall not longer reference each other using the `direction` specified. The reference to delete have to be of the relation defined by `direction` using the type of reference identified by the `referenceTypeId` specified.

C#

```
public OpcDeleteReference(OpcNodeId nodeId, OpcNodeId targetNodeId, OpcReferenceDirection? direction, OpcNodeId referenceTypeId)
```

Parameters

`nodeId` `OpcNodeId`

The `OpcNodeId` through that the source node can be identified and accessed.

`targetNodeId` `OpcNodeId`

The `OpcNodeId` through that the target node can be identified and accessed.

`direction` `Nullable<OpcReferenceDirection>`

One of the members defined by the `OpcReferenceDirection` enumeration which defines the kind of relation of reference to delete or a null reference (Nothing in Visual Basic) in case there the relation is to be deleted in bidirectional direction.

`referenceTypeId` `OpcNodeId`

The `OpcNodeId` which identifies the type of reference to use to setup the reference between the source

and the target node identified by the `nodeId` and the `targetNodeId`.

Exceptions

ArgumentException

The `nodeId`, `targetNodeId` or `referenceTypeId` is equals `Null`.

ArgumentNullException

The `nodeId`, `targetNodeId` or `referenceTypeId` is a null reference (Nothing in Visual Basic).

OpcDeleteReference(OpcNodeId, OpcNodeId, Nullable<OpcReferenceDirection>, OpcReferenceType)

Initializes a new instance of the `OpcDeleteReference` class using the identifiers of the nodes which shall not longer reference each other using the `direction` specified. The reference to delete have to be of the relation defined by `direction` using the `referenceType` specified as the type of reference.

C#

```
public OpcDeleteReference(OpcNodeId nodeId, OpcNodeId targetNodeId, OpcReferenceDirection? direction, OpcReferenceType referenceType)
```

Parameters

nodeId OpcNodeId

The `OpcNodeId` through that the source node can be identified and accessed.

targetNodeId OpcNodeId

The `OpcNodeId` through that the target node can be identified and accessed.

direction Nullable<OpcReferenceDirection>

One of the members defined by the `OpcReferenceDirection` enumeration which defines the kind of relation of reference to delete or a null reference (Nothing in Visual Basic) in case there the relation is to be deleted in bidirectional direction.

referenceType OpcReferenceType

One of the members defined by the `OpcReferenceType` enumeration to use to setup the reference between the source and the target node identified by the `nodeId` and the `targetNodeId`.

Exceptions

ArgumentException

The `nodeId` or `targetNodeId` is equals `Null`.

ArgumentNullException

The `nodeId` or `targetNodeId` is a null reference (Nothing in Visual Basic).

Properties

Direction

Gets a value indicating the logical direction of the reference to delete.

C#

```
public OpcReferenceDirection? Direction { get; }
```

Property Value

[Nullable<OpcReferenceDirection>](#)

One of the members defined by the [OpcReferenceDirection](#) enumeration indicating which relation is to be deleted or a null reference (Nothing in Visual Basic) in case there the relations are to be deleted bidirectional. The default value is a null reference (Nothing in Visual Basic).

ReferenceType

Gets a value which defines a pre-defined used [ReferenceTypeld](#) as one of the members defined by the [OpcReferenceType](#) enumeration to simplify querying standard reference types.

C#

```
public OpcReferenceType ReferenceType { get; }
```

Property Value

[OpcReferenceType](#)

One of the members defined by the [OpcReferenceType](#) enumeration. The default value is [Organizes](#).

ReferenceTypeld

Gets the identifier which identifies the node that defines the semantic of the reference between the source and the target node and generally reflects an operation between the two, such as "A contains B".

C#

```
public OpcNodeId ReferenceTypeId { get; }
```

Property Value

[OpcNodeld](#)

The [OpcNodeld](#) of the reference type node which defines the relation semantic between the source and the target node. The default value is [Organizes](#).

TargetNodId

Gets the identifier which identifies the target node which acts as the opponent in the reference to delete between the source node (identified by [NodId](#)) the target node.

C#

```
public OpcNodeId TargetNodeId { get; }
```

Property Value

OpcNodId

The [OpcNodId](#) of the target node acting as the opponent of the reference to delete.
