

# PlcOperandType Enum

**Namespace:** IPS7Lnk.Advanced

**Assemblies:** IPS7LnkNet.Advanced.dll

Specifies the different operands that can be used to access a programmable logic controller (PLC).

**C#**

```
public enum PlcOperandType
```

**Inheritance** [Object](#) > [ValueType](#) > [Enum](#) > PlcOperandType

## Fields

Name	Value	Description
Input	0	The operand used to access input areas of the controller.
PeripheryInput	1	The operand used to access periphery input areas of the controller.
Output	2	The operand used to access output areas of the controller.
PeripheryOutput	3	The operand used to access periphery output areas of the controller.
Flag	4	The operand used to access flag areas of the controller.
DataBlock	5	The operand used to access data block areas of the controller.
Counter	6	The operand used to access counter areas of the controller.
Timer	7	The operand used to access timer areas of the controller.
UserDefinedType	14	The operand used to access user defined type areas of the controller.
