

# PlcValueMember Members

**Namespace:** IPS7Lnk.Advanced

**Assemblies:** IPS7LnkNet.Advanced.dll, IPS7LnkNet.Advanced.dll

The [PlcValueMember](#) type exposes the following members.

## Constructors

### PlcValueMember(PlcName, IPlcValue)

Initializes a new instance of the [PlcValueMember](#) class using the [name](#) and [value](#) specified.

**C#**

```
public PlcValueMember(PlcName name, IPlcValue value)
```

#### Parameters

[name](#) [PlcName](#)

The name of the member.

[value](#) [IPlcValue](#)

The [IPlcValue](#) to be represented.

#### Exceptions

[ArgumentNullException](#)

The [name](#) or [value](#) is a null reference (Nothing in Visual Basic).

## Properties

### Value

Gets the value represented by the member.

**C#**

```
public IPlcValue Value { get; }
```

#### Property Value

[IPlcValue](#)

The [IPlcValue](#) represented by the member.

# Methods

## GetValueCore(PlcObject)

Retrieves the value of the member supported by the given **instance**.

**C#**

```
protected override object GetValueCore(PlcObject instance)
```

### Parameters

**instance** [PlcObject](#)

The [PlcObject](#) from that the value of the member is to be retrieved.

### Returns

[Object](#)

The value of the member supported by the **instance**.

## HasValueCore(PlcObject)

Retrieves a value indicating whether the member supported by the given **instance** is associated with a value.

**C#**

```
protected override bool HasValueCore(PlcObject instance)
```

### Parameters

**instance** [PlcObject](#)

The [PlcObject](#) its member value is to be tested.

### Returns

[Boolean](#)

The value true, if a value is associated with the instance using this member; otherwise the value false.

## MakeAbsoluteMember(PlcIdentity)

Retrieves the [PlcValueMember](#) as an absolute addressable PLC member.

**C#**

```
public override IPlcMemberInfo MakeAbsoluteMember(PlcIdentity identity)
```

## Parameters

**identity** [PlcIdentity](#)

The [PlcIdentity](#) to use to define the absolute location. This identity is used to define the basis starting from that the member is located.

## Returns

[IPlcMemberInfo](#)

In case there [IsAbsolute](#) is equals true the reference to this member; otherwise a new instance of the member which refers to an absolute [PlcType](#).

## Exceptions

[ArgumentException](#)

The **identity** specified does not provide the necessary information required to address the type of data.

[ArgumentNullException](#)

The **identity** is a null reference (Nothing in Visual Basic).

# RelocateCore(PlcAddress)

Relocates the member to the **address** specified.

**C#**

```
protected override PlcMember RelocateCore(PlcAddress address)
```

## Parameters

**address** [PlcAddress](#)

The [PlcAddress](#) to that the member is to be relocated.

## Returns

[PlcMember](#)

A new instance of the same type as this PLC member instance relocated to the **address** specified.

# SetValueCore(PlcObject, Object)

Stores the **value** of the member supported by the given **instance**.

**C#**

```
protected override void SetValueCore(PlcObject instance, object value)
```

## Parameters

**instance** [PlcObject](#)

The [PlcObject](#) into that the value of the member is to be stored.

**value** [Object](#)

The value to store.

## ToString()

Returns a string that represents the [PlcValueMember](#).

### C#

```
public override string ToString()
```

## Returns

[String](#)

A string that represents the [PlcValueMember](#).
